

CHIARA BOISAUBIN

Front-End Developer//
UX Designer

Hiya!

My name is Chiara BoisAubin. I currently live in Boston, MA. I attended Wheaton College for Asian Studies and Studio Art and went to Art Institute of Pittsburgh for Digital Design Certification focusing on web design and development. Designing and coding is something that I enjoy doing. Web development allows me to use my passion for technology and being able to be creative and build products that can be useful for people; turning an idea into reality. I care about user experience & figuring out what people enjoy on products.

I like too...

adventure

taking photos

movie lover

analist

Objective / Goal

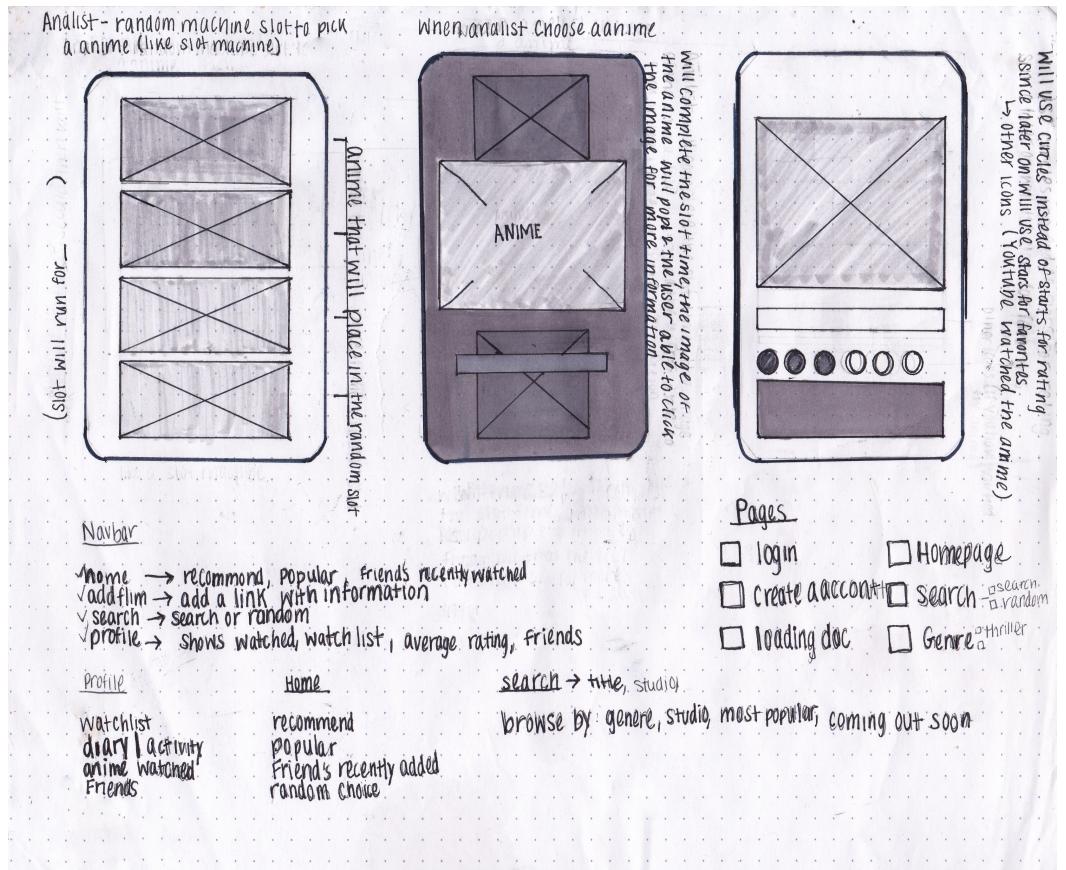

Constructing user flow, wireframes, prototype, and mockups for the visual aid. Even though it is a social platform it is a way to organize what anime the user has watched.

Responsibility

- User experience (userflows, wireframe prototypes)
- Creating logo and finding a loud color scheme

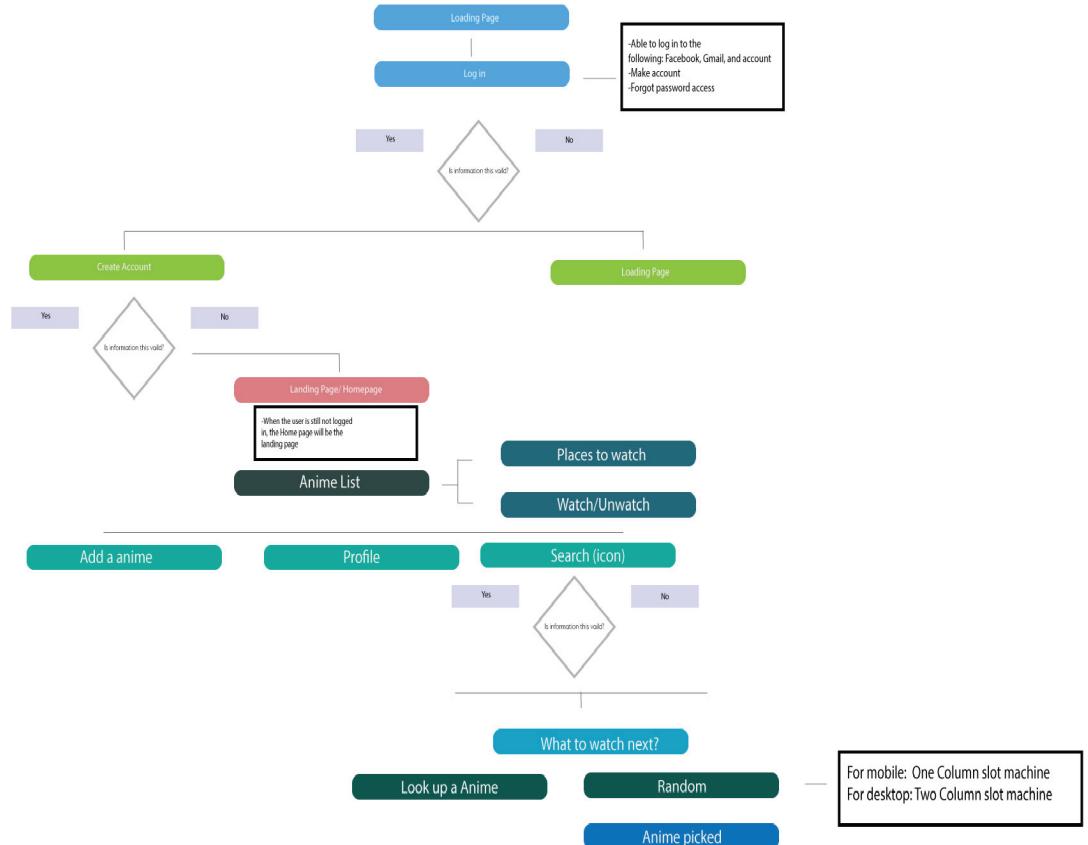

sketches

So I already had some ideas on a grid and how to display the content. I wanted to make sure that the pages visually made sense. I made a sketch of the slot machine that will pick an anime and provide the anime and rating if the user has not seen it yet.

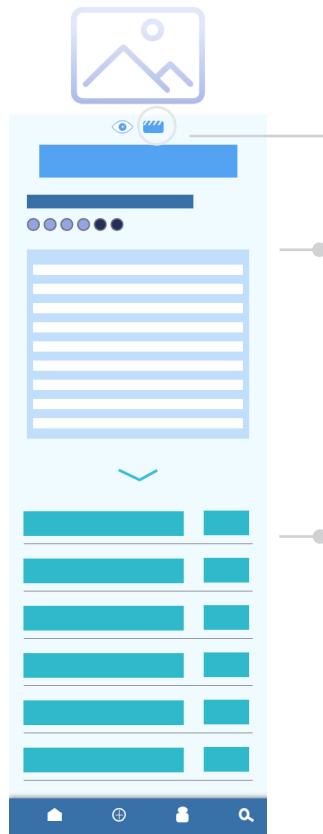

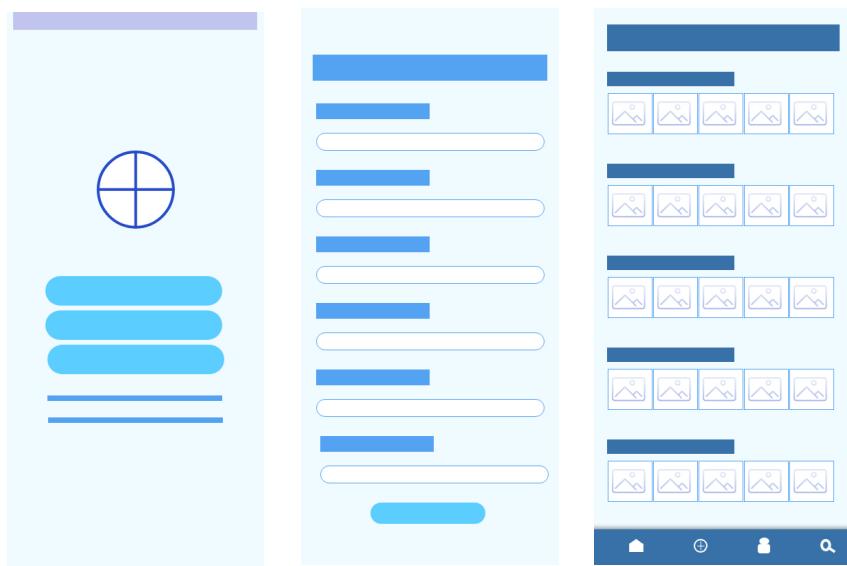

userflow

The userflow chart was a great way to figure out the best for the user to navigate to the pages after they log in and create their icon.

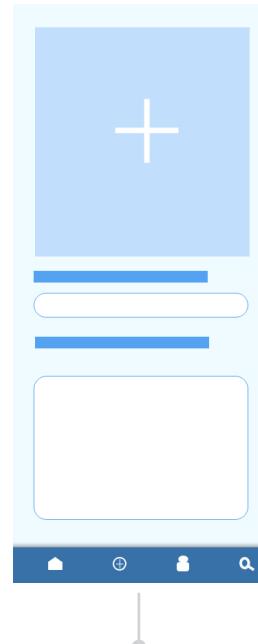

wireframe

Login you are able to use facebook, gmail, or other emails. Once the account it registers and the user picks an icon, the user will be sent to a page that will show the most popular anime.

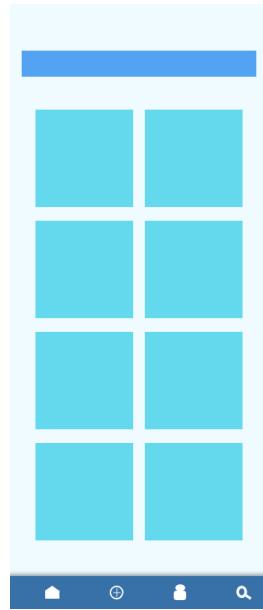

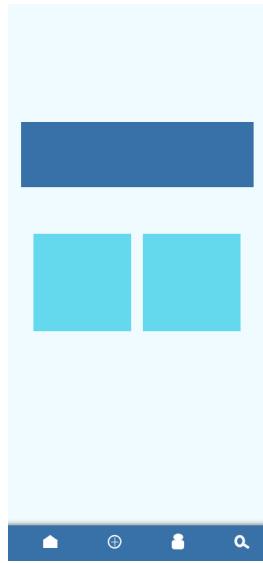

- If the user can click on the image or title and have access to information. The eye icon changes if the user has seen an anime (it is clickable). The description will have the year when the anime was released
- The dropdown has other information like directors, studios, and voice actors.

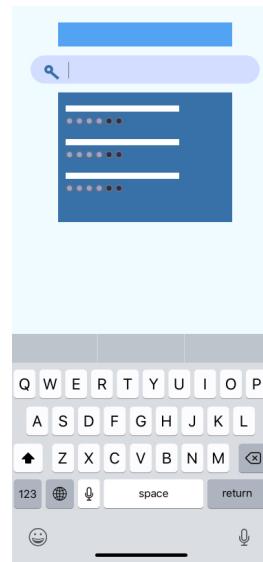

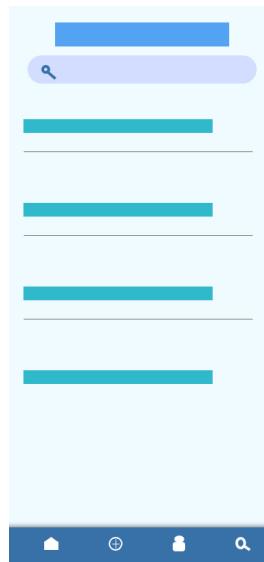

Users will be allowed to add an anime to assist will the data

User can click on this icon and will find where to watch the anime

For searching for an anime, I wanted to make a full page so the user can like the site choose an anime for the, find by genre, or find by the studio, director, voice actor, or the name of the anime.

Once the slot machine picks an anime that the user has not seen yet, it shows an image, the title and year

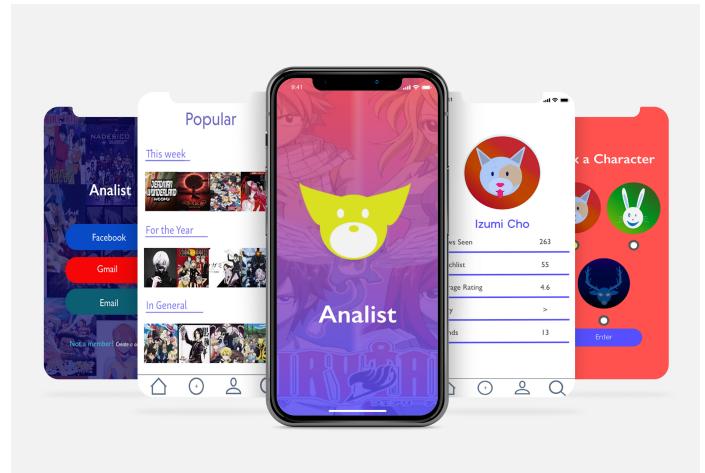

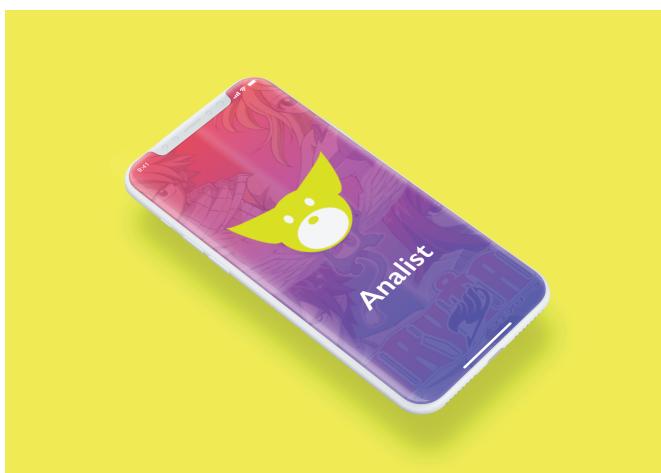

prototype - desktop

The desktop prototype consists of four main pages:

- Home:** Shows a user profile for "Izumi Cho" with statistics: Shows Seen (263), Watchlist (46), Average Rating (5.5), and Friends (13). It also displays a grid of anime titles: A-I Pictures, A.P.P.P., AIC, Arms Corporation, Artlan, Asahi Production, Asread, and Bee Train.
- Profile:** Shows the user profile for "Izumi Cho" with the same statistics and a "Recommended by Us" section featuring thumbnails for Deadman Wonderland, Slayers, Samurai Champloo, Birdy, and Cowboy Bebop.
- Search:** Shows a search results page for "Deadman Wonderland" with a thumbnail, description, and more information table.
- Detail:** Shows the detailed page for "Deadman Wonderland" with a thumbnail, description, more information table, and a "Where To Watch This Anime" section listing platforms: Crunchyroll, Netflix, Funimation, Hulu, VRV, Prime Video, and YouTube.

icons that can

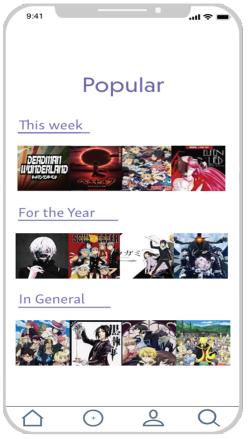

pick a icon

Why the icons instead of photos?

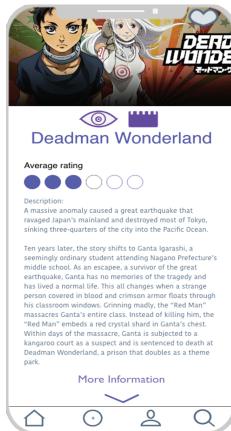

I wanted to make all the users to be neutral.

Objective / Goal

To make a web application to reserve seating at a restaurant, have multiple methods to make payment, also save and provide dietary requirements before arrival. Easy navigation, visually stands out, simple and secure payment. User input is not complex

Responsibility

- User experience (userflows, wireframe prototypes)
- Creating a color scheme and create icons
- Front-End Developer

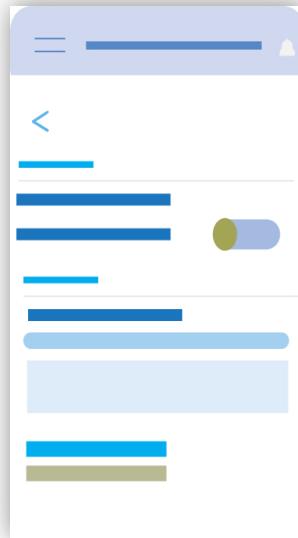

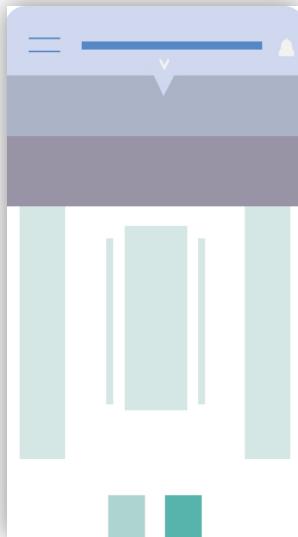

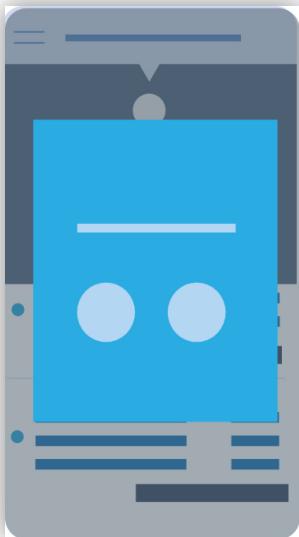

wireframe

These pages will show the current amount that shows individuals total as well as the group total

menu and special of the day

tips from that day will only show the total from the credit

notification if a customer needs assistance

website

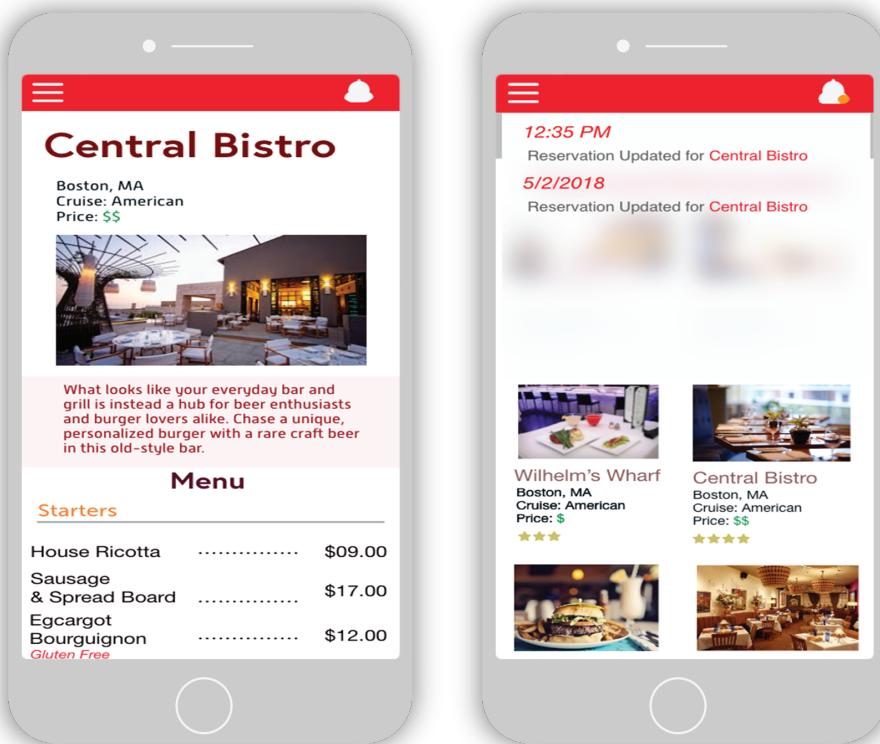

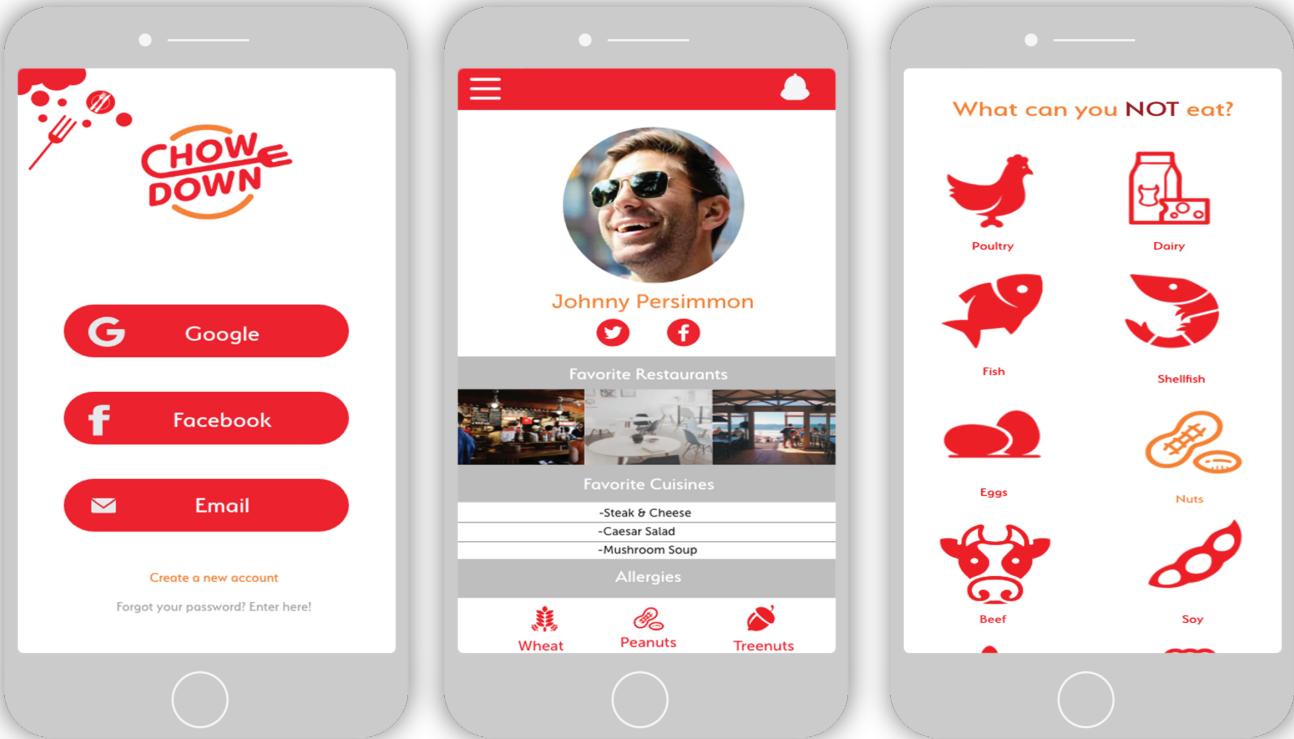

A screenshot of a web browser showing a reservation form. At the top is a red header bar with a search bar containing "location, cuisine, price". Below the header is a navigation bar with a profile picture of a person named "Kiki" and a bell icon. The main form area has a title "Make Reservations". It contains two rows of input fields: "Name of Leader" (Kiki) and "Email address" (happy@gmail.com). The second row contains "Phone Number" (XXX-XXX-XXXX) and "How many people" (1). A note below the phone number field says "minimum of 20 people". At the bottom is a large red "Submit" button.

A screenshot of a web browser showing a reservation form with a different layout. The red header bar and profile section are identical to the first screenshot. The main form area has a title "Make Reservations". It contains two rows of input fields: "Name of Leader" (Kiki) and "Email address" (happy@gmail.com). The second row contains "Phone Number" (XXX-XXX-XXXX) and "How many people" (1). A note below the phone number field says "minimum of 20 people". At the bottom is a large red "Submit" button.

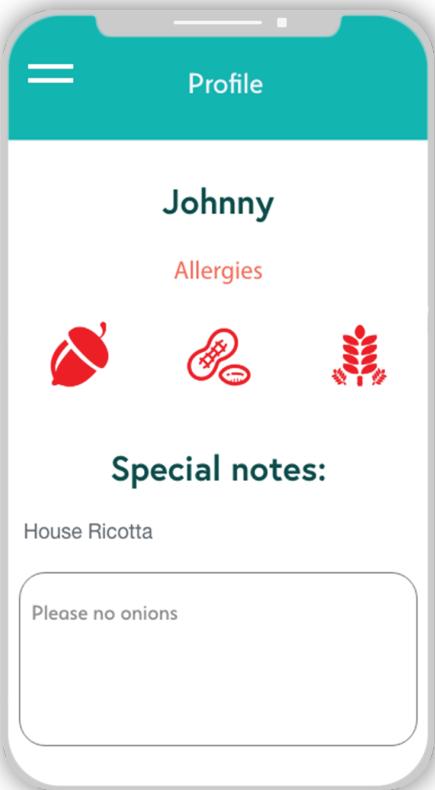

A screenshot of a web browser showing a user profile page. At the top is a red header bar with a search bar containing "location, cuisine, price". Below the header is a navigation bar with a profile picture of a person named "Johnny Persimmon" and social media links for Twitter and Facebook. The main area shows "I cannot eat" with icons for tree nuts, wheat, and nuts. It also shows "Favorite Cusine" with options like "Steak and Cheese", "Korean BBQ", and "Cesar Salad". Below that is a section for "Saved Payed Method" with the card information "Card Information: XXX6790".
